National training seminar on high-performance energy efficiency standards in buildings in
Kyrgyzstan

About event:

*By the end of this training seminar the participants will have gain knowledge and expertise
on high-performance
energy efficiency standards in buildings and will have the following competences:

- Understanding the Energy Management and Monitoring, Reporting and Verification in the
buildings sector
- Competence to understand the institutional, organizational and legal aspects of energy
management and
monitoring, reporting and verification at the global and EU level
- Knowledge to organize the Municipal energy management as part of the national
monitoring, reporting
and verification system
- Knowledge to use existing or organize the development of the Energy Management
Information System
- Understanding of the energy auditing process and confidence in using multicriteria analysis
tools
- Ability to use and understand the funding possibilities for energy efficiency measures in
buildings

National training seminar on high-performance energy efficiency standards in buildings in the Republic of Moldova

About event:

*The seminar is one of the activities of project Enhancing national capacities to develop and implement energy efficiency standards for buildings in the UNECE region. *The training seminar aims to (i) improve knowledge of stakeholders on energy management and monitoring, reporting and verification in the buildings sector; (ii) provide information on institutional, organizational and legal aspects of energy management and monitoring, reporting and verification at the global and EU levels; (iii) introduce municipal energy management as a part of the national monitoring, reporting and verification system; (iv) provide energy management information system and examples of energy management system tools; (v) cover energy audits procedure of buildings and multicriteria analysis; as well as (vi) provide best practices of funding possibilities for energy efficiency measures in buildings.

Event Date:

Jan 23, 2020 - Jan 23, 2020

Organizer: UNDP

Other Organizers:

Partners:

Ministry of Construction of the Republic of Uzbekistan, Global Environment Facility (GEF)

Event title: Practical training on energy efficiency technologies in housing construction

About event:

*On June 23, 2020, a practical training on energy efficiency technologies in construction of four-story apartment buildings in rural areas was held in Nukus, Karakalpakstan.

*The practical training was organized and carried out as a part of the project Market transformation for sustainable rural housing

*The training was attended by the representatives of construction and architectural companies and the Nukus city hokimiyat. At the training modern technologies for warming exterior walls, floors, and roofs of buildings by using energy-efficient construction materials were demonstrated.

Meeting New Opportunities: Green Recovery of Uzbekistan After the COVID-19 Coronavirus Pandemic

About event:

*Online forum bringing together Uzbek and international stakeholders to discuss how Uzbekistan's recovery from the COVID-19 crisis can be used to develop a green economy.

*The event intended to build on the important progress being made in Uzbekistan to develop strategies for mitigation and adaptation in the face of climate change. Further objectives were technical discussions on how to pursue a green recovery in Uzbekistan, the creation of platforms to discuss the use of renewable energy, energy efficiency, and climate change mitigation policies that support resilient societies and economies, and the development of concrete policy recommendations.

* Participants in the forum will explore how the response to the crisis can put Uzbekistan on a more environmentally friendly and low-carbon path towards further economic development.

11th International Conference on Improving Energy Efficiency in Commercial Buildings and Smart Communities

About event:

*The IE ECB&SC'20 conference will take place on 1-2 October 2020 in Frankfurt (Germany) during Light+Building, the world's leading trade fair for lighting and building services technology, taking place in Frankfurt from 27 September to 2 October showing innovative products in the fields of lighting, electrical engineering as well as home and building automation. *The IE ECB&SC conference seeks to bring together all the key players in these sectors, including commercial buildings' investors and property managers, academia and experts, equipment manufacturers, service providers (ESCOs, utilities, facilities management companies, telecoms), urban planners and local and national policy makers, with a view to exchange information and to network.

Integrating low-temperature renewable energy sources in District Energy Systems: Focus on Belarus

About event:

* In the framework of "Energy solutions for cities of the Future" project, and under the umbrella of the Global Geotherman Alliance, IRENA organised a virtual workshop with a focus on Belarus

*The objective of the workshop was to equip district heating and cooling stakeholders in Belarus, including policymakers at the national, regional and local levels; urban planners; district heating operators/utilities; etc. with knowledge on the options and tools for integrating low-temperature renewable energy sources in district heating and cooling networks.

Partners: Global Environment Facility (GEF)

Event title: Training on building codes for energy efficiency in buildings

About event:

*The practical training was organized and carried out as a part of the project Market transformation for sustainable rural housing

*International best practices on assessment of the energy performance of buildings have been shared.

*During the event, more than 25 local specialists and architecture bureaus were trained on and raised their awareness about the modern approaches to the assessment of the energy performance of buildings, the heat protection properties of structures and the impact of various factors on the energy consumption of buildings.

*Moreover, workshop participants learned on how to assess energy consumption and energy efficiency of buildings. Participants have acquired skills in working with programs for calculating temperature fields of enclosing structures' nodes.

*The knowledge gained during the training will be used by specialists to design energy-efficient and low-carbon housing throughout Uzbekistan, which will improve the living conditions of the population of the country and help to put the housing sector on a sustainable development path.
